

HYTANBIO

Oral dissolving film product concepts and custom solutions

2026 B2B portfolio edition

A focused overview of the supplied concept library, formulation workflow and sensory options. Final ingredients, serving levels, claims and manufacturing documentation require project-specific review.

Company and project platform

HYTANBIO Tech was founded in Hong Kong in 2026 for international business development. The stated manufacturing base in Shaoxing, Mainland China was established in 2014. The company profile describes a research center covering more than 4,000 square meters, peptide synthesis and HPLC analytical and preparative resources.

Oral film projects

OEM and private label support; ODM custom formulation; CRO feasibility and analytical scope; CDMO development linked to manufacturing transfer. All concepts begin with target-market, ingredient and practical loading review.

Seven project checkpoints

1 Project brief. 2 Feasibility review. 3 Prototype and testing. 4 Sample approval. 5 Packaging approval. 6 Order and production. 7 Release and support.

Quality documentation

Available documents are confirmed for the actual entity, scope and finished project. Supplied certificate references identify separate legal entities and do not automatically establish HYTANBIO certification. Facility registration is not product approval.
